

"Diverse" Tracts in Metro Atlanta 1990 vs 2010

During the 1990s and 2000s, the U.S. experienced significant shifts in immigration patterns as waves of Latinx and Asian immigrants settled outside of traditional destination cities in favor of new metropolitan areas in the Sunbelt region. With the increase of multi-ethnicity across the U.S., "global neighborhoods" have emerged.

These maps present global neighborhoods (tracts), or what I term "diverse neighborhoods," in the 29 counties of the Atlanta Metropolitan Statistical Area (MSA). They look at the diverse tracts in 1990 and 2010 to understand how these tracts have spatially emerged and persisted.

While recognizing the complexity of racial categorization in quantitative data, I define "diverse tracts" as having a substantial share of the four largest racial groups in Atlanta - non-Latinx White, non-Latinx Black, Latinx, and Asian.
